

PROFESSIONAL ICE MELTER[®]

Made with Platinum Defrost[®] to melt snow and ice in harsh conditions down to -16°F.

Professional Ice Melter[®] is a 4-way blend of calcium, magnesium, potassium and sodium chlorides that are triple-screened to provide uniform spreading with maximum results. When combined with Defrost, applications of Professional Ice Melter are more effective and chloride use can be reduced by 33-50%, making it safer for pets, children and plants.

Less Waste

Improved granule sizing allows for maximum control and less waste. Formulated with an organic anti-sticking agent to avoid clumping and provide longer storage life.

Reduced Corrosion

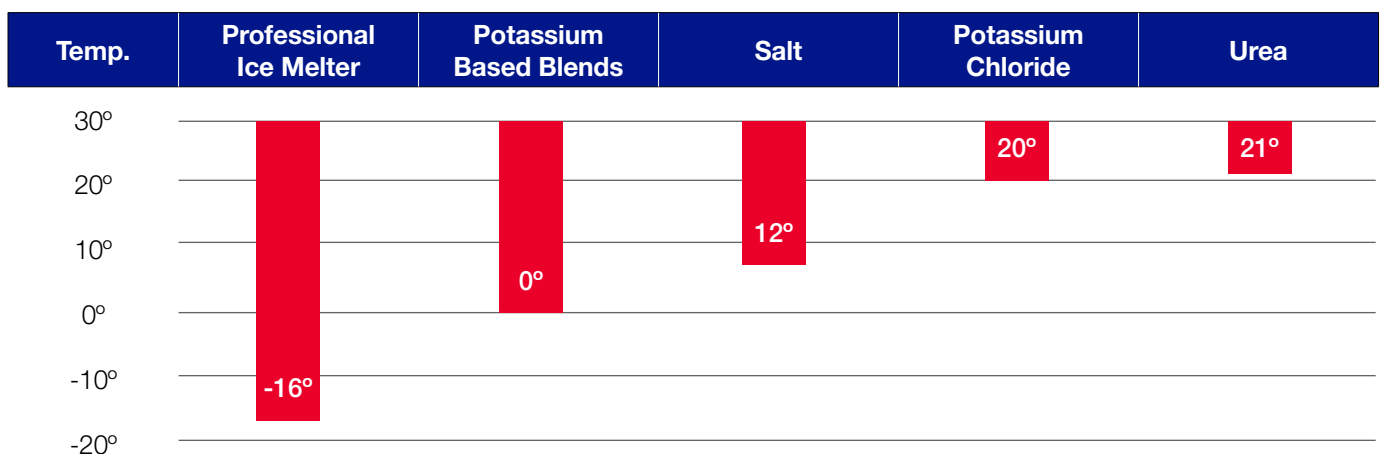

Special ingredients have been added to improve corrosion resistance to ferrous metals by 60%, reducing rust on equipment and vehicles.

Environmentally Friendly

Safer for vegetation, skin, concrete, metal, vehicles and carpeting. All components are water soluble, non-staining, odorless and 100% biodegradable.

Accuflow[®] Pattern Indicator

The blue color provides for smoother and more consistent coverage, especially during low visibility conditions.

■ Melting point in degrees Fahrenheit

- Melt more ice, faster
- Tech-grade granules
- Less corrosive
- Safer for pets and plants
